Summary

Full-Stack Engineer with **3+ years** building and shipping production web platforms at Teach For India serving up to **50K applicants/year**, now focused on **AI-assisted development**, **developer experience (DevEx)**, and **workflow automation**. Primary contributor to a large applicant-assessment platform (in-house test engine, **video proctoring**, **Salesforce sync**) and builder of **Claude Code** agentic workflows (slash commands, subagents, **MCP / Model Context Protocol**) and **CI/CD** pipelines. Strong **React**, **Node.js**, **Express**, **MongoDB** and **REST API** foundation; proven at turning tangled enterprise workflows into clean, automated, reliable products.

Core Competencies

AI-Assisted & Agentic Development, LLM Integration, Prompt Engineering, MCP (Model Context Protocol), Workflow & Process Automation, Full-Stack Web Development, REST API & Microservices Design, System Design, CI/CD & Developer Experience (DevEx), Cloud Deployment (AWS, Azure), Enterprise Integration (Salesforce, Google Workspace), Search Relevance (Algolia), Authentication & OAuth/SSO, Performance Optimization, Production Reliability & Observability, Technical Documentation (BRD/PRD)

Technical Skills

Languages	JavaScript, TypeScript, Java, Python, C++, SQL, PL/SQL, Apex, HTML5, CSS3
Frontend	React (17/18), Redux, React Router, Material UI, styled-components, WebRTC/MediaRecorder, Storybook, Responsive UI
Backend & Data	Node.js, Express, Mongoose, MongoDB, Redis, Bull (job queues), REST APIs, Microservices, PostgreSQL, Prisma, Snowflake
AI & Automation	Anthropic Claude API, Claude Code (slash commands, subagents, hooks), MCP (Model Context Protocol) servers, Agentic / AI-assisted dev workflows, TensorFlow.js (in-browser face detection), Whisper API, Prompt Engineering, BRD/PRD authoring
Cloud & Integrations	AWS (S3, ECS), Algolia, Salesforce (jsforce, REST/Bulk API), Google Workspace/Directory API, Passport.js OAuth (Google/LinkedIn), OTP, SendGrid, FormAssembly
DevOps & Tools	Git, GitHub, GitHub Actions CI/CD, Docker, Husky, JWT, PM2 (Cluster Mode), Salesforce DX, sfdx-git-delta, Sentry, Netlify
Practices	Agile/Scrum, Code Review, System Design, Data Structures & Algorithms, Technical Documentation

Work Experience

Teach For India Associate, Web Development	Aug 2023 – Present, Pune, India
- Primary contributor (2,000+ commits) across three production portals: Fellowship (up to 50K applicants/year), Volunteer, and Internship; led the Volunteer matching-2.0 revamp and owned major Fellowship subsystems end-to-end. - Co-built and migrated applicant assessments onto an in-house test/assessment engine (online test, Critical Thinking, Problem Solving), retiring a paid third-party vendor (AMCAT); built Bull-queue scoring, automated test-regeneration approval jobs, and idempotent abort/submit recovery. - Owned the bidirectional Salesforce–MongoDB integration (jsforce) across 8+ objects: reusable picklist value-mapping, atomic upserts that fixed optimistic-locking (VersionError) crashes, and multi-provider auth (Google/LinkedIn OAuth, OTP) via Passport.js. - Architected async job processing with Bull + Redis across 20+ job types (Salesforce sync, assessment scoring, data sync) on dedicated PM2-clustered worker processes separated from the API for peak-cycle scalability. - Drove AI-assisted developer tooling / DevEx for the web team: built Claude Code slash commands and specialized subagents, integrated MCP servers (incl. Sentry MCP), and authored multiple technical BRDs that fed into implementation. - Hardened production reliability under live admissions traffic using Sentry: resolved null-deref and Redis crashes and a silent email-delivery failure (made queue jobs fail/retry/alert on external-API errors), cutting error rate by 15% and resolving 50+ production bugs. - Enhanced the internal Kitchen admin dashboard: a mock application system exercising the full applicant waterfall for QA, matriculation dashboards/events, automated interview-slot fetch with real-time capacity deduction, and feature-flag rollouts without code deploys.	

Hexaware Technologies Associate Software Engineer	June 2022 – Apr 2023, Pune, India
- Migrated PL/SQL packages to SQL for the Oracle to Snowflake data warehouse transition, ensuring zero data loss across production schemas. - Collaborated in a cross-functional Git/GitHub workflow with code reviews, issue tracking, and release cadences on a multi-engineer data modernization team.	

AI, Automation & Developer Tooling

CATIA Agentic Mesh: Multi-Agent SDLC Automation	Freelance
Python, LangGraph, Anthropic Claude API (Opus/Sonnet/Haiku), MCP, FastAPI, Docker, Azure Container Apps, RBAC - Designed and built the core of an agentic mesh, now functional and in active use by the client's engineering team, that automates the software delivery lifecycle for CATIA customizations (CAA, VBA, Python, C#) across Jira, Confluence, HP-ALM, GitLab, and ServiceNow, orchestrated with LangGraph and driven by Claude (Anthropic API) with cost-aware model routing (Opus/Sonnet/Haiku). - Implemented structural human-in-the-loop: planner agents hold read-only MCP tools and propose writes; the graph pauses at RBAC-gated approval gates and executes only approved actions, with a full audit trail per run. - Built 7 MCP (Model Context Protocol) servers over Streamable HTTP with a shared compliance / PII-redaction layer; FastAPI backend, Docker packaging, deployed to Azure Container Apps (Bicep, Key Vault, managed identity).	

Salesforce Version Control & AI-Assisted DevEx (CORE)

GitHub Actions, Salesforce DX, sfdx-git-delta, JWT, Husky, Claude Code, MCP, Apex

- Built end-to-end **CI/CD** (5 **GitHub Actions** workflows) for a production **Salesforce** org used by a 3-developer non-Git team: **delta-only deploys** via sfdx-git-delta (cut deploy time from 15-20 min to 1-2), **JWT** Bearer auth from CI, PR-label-driven configurable Apex test strategies, and a gated manual prod-deploy workflow.
- Authored **10 Claude Code slash commands** (/new-task, /finish-task, /promote-to-prod, /hotfix) wrapping all Git/PR ceremony behind plain prompts, plus a **deploy-impact-reviewer** subagent that risk-classifies prod diffs (HIGH/MEDIUM/LOW) and a **Salesforce DX MCP** integration, so non-Git users ship safely.
- Added **Husky** pre-commit hooks (Prettier/ESLint/sfdx-lwc-jest), a pipeline smoke test, the branch model (prod/integration/feature/hotfix), and SF-fluent onboarding docs.

Full-Stack Engineering Projects

Fellowship Application Portal

apply.teachforindia.org

React 18, Redux, Node.js, Express, MongoDB, Mongoose, Redis, Bull, Passport.js, AWS S3, TensorFlow.js, Whisper API, jsPDF, PM2, Netlify

- Architected a 3-app **monorepo** (Express **REST API**, React 18 + Redux applicant portal, React admin Kitchen) with **cohort-scoped MongoDB collections** (e.g. Users_2024) for year-over-year data isolation and clean annual cycles; reduced initial load time by **20%** via **code splitting**, lazy loading, and response caching.
- Engineered a browser-based **video proctoring** and recording subsystem with **WebRTC / MediaRecorder** capture, in-browser **computer-vision face verification** (TensorFlow.js Human model, single-face detection), real-time camera-integrity and permission-revoke tracking, and fault-tolerant **AWS S3** backup/upload tuned for low-bandwidth applicants.
- Built an interview-response **video recorder** (cross-browser WebM handling), **OpenAI Whisper** transcription, and **dynamic PDF generation** (offer letters, CVs); integrated a **schema-driven (JSON-configured) dynamic form engine** with runtime token substitution for cohort-dynamic content.
- Designed a parallel **deferred-fellows** subsystem (separate Mongo collection, session-scoped Mongoose model routing, **React Router** guards, impersonation) and a blocking **DPDP Act 2023** consent gate with persisted consent tracking, without polluting cohort applicant counts.

Volunteer Management System

volunteer.teachforindia.org

React 17, Material UI, Algolia (InstantSearch), FormAssembly, Node.js, Salesforce, Redis, Bull, React Context, Google Analytics, Hotjar

- Led the **matching-2.0 revamp** (3,500+ line, 41-file rebuild): a feature-folded **React + Context API action-first wizard** (mode, city, cluster, availability, subjects, summary) replacing flat dropdown filters with chip/card selection and step-wise auto-scroll, cutting clicks by **36%** and improving mobile responsiveness.
- Engineered the **Algolia** search integration (InstantSearch lite client): a **filter-DSL adapter** with input validation and escaping, a custom **React hook** with query deduplication and memoized clients, and **faceted** per-cluster availability counts.
- Built a parameterized **FormAssembly** prefill URL generator mapping wizard state to application fields; optimized rendering with route-level **lazy loading** (React.lazy/Suspense), memoization, and effect-dependency fixes; instrumented **Google Analytics** (gtag) and **Hotjar** with cookie-based referral tracking.

Crossroads Integration Layer

Node.js, Express, REST APIs, Bull, Redis, Salesforce (jsforce), Algolia, Google Workspace Directory API (Admin SDK), OAuth2

- Built a Salesforce-driven **Google Workspace Directory API (Admin SDK)** microservice exposing a bulk-assign **REST** endpoint that auto-provisions fellow accounts into **Google Groups**: lazy per-request **OAuth2** client, parallel batched writes, idempotent conflict (409) handling, a typed error taxonomy, and **role-based access control**, eliminating a manual IT onboarding step.
- Engineered a recordType-aware **Salesforce to Algolia** sync (queue-based via **Bull/Redis**) unifying volunteer and internship opportunities behind a single search index, with smart auto-removal of fulfilled, inactive, or referred records.

Student Achievement Tracker (SAT)

saturn.teachforindia.org

TypeScript, Express, Prisma, PostgreSQL, Zod, Pino, REST APIs, React, Vite, MUI, TanStack Query, BullMQ, Turbo/pnpm monorepo, AWS ECS, S3/CloudFront, GitHub Actions

- Owning and extending **SAT**, an enterprise **TypeScript** monorepo platform tracking student assessment data across 8 cities (28,000+ students, 433 schools); driving its continued development and feature delivery.
- Platform stack: **Express + Prisma + PostgreSQL** REST API with **Zod** validation and **Pino** logging, **Vite + React 18** frontend with **TanStack Query**, a **BullMQ** ingestion/worker service, a **Salesforce** sync service, and **AWS ECS + S3/CloudFront** CI/CD via GitHub Actions.

Certifications

Claude 101, Anthropic

[Verify](#)

Foundations of building with Claude: prompting, the Claude API, and AI-assisted development workflows.

Claude Code 101, Anthropic

Agentic engineering with Claude Code: slash commands, subagents, MCP, and AI-native developer workflows.

AWS Academy Cloud Foundations

[Verify](#)

Cloud computing fundamentals, core AWS services, architecture, security, and pricing/billing.

Microsoft Azure Fundamentals (AZ-900)

[Verify](#)

Azure cloud concepts, core services, security, governance, and cost management.

Achievements

4-Star in C++ at HackerRank

[Profile](#)

Ranked **GeeksforGeeks institutional rank 15** with **130+ problems solved** across DSA, algorithms, and competitive programming.

150+ LeetCode Problems Solved

[Profile](#)

Consistent focus on data structures, algorithms, and system design problem solving.

Key Impact Metrics

- **50K+** applicants/year served by owned platforms
- **2,000+** commits as primary contributor (3 portals)
- **90%** faster Salesforce deploys (15-20 min to 1-2)
- **36%** fewer clicks via the volunteer-portal revamp
- **20%** faster initial load on the applicant portal
- **15%** lower production error rate
- **50+** production bugs resolved under live traffic
- **1** paid vendor (AMCAT) retired via an in-house engine
- **8+** Salesforce objects integrated bidirectionally
- **20+** async job types on Bull + Redis
- **10** Claude Code slash commands shipped
- **7** MCP servers built for an agentic mesh
- **3,500+** line volunteer-portal rebuild
- **280+** DSA problems solved across platforms

Professional Profile

Ownership & Depth

Primary contributor (2,000+ commits) who owned end-to-end subsystems, the in-house assessment engine, video proctoring, and the Salesforce sync layer, on a platform serving up to 50K applicants/year.

AI-Native Engineering

Uses Claude Code, MCP, and agentic / multi-agent workflows (slash commands, subagents) as core engineering accelerators, not just as products, to prototype and ship faster.

Automation & Integration

Turns manual enterprise workflows across Salesforce, Google Workspace, and search (Algolia) into automated, reliable, queue-driven pipelines.

Reliability-First

Hardens production under live traffic with observability (Sentry), idempotency, and retry/alerting, reducing error rates and resolving incidents quickly.

Strong Fundamentals

Solid data-structures, algorithms, and system-design base (4-Star HackerRank, 150+ LeetCode) applied to real architecture and performance decisions.

Education

Marathwada Mitra Mandal's College of Engineering

B.E. in Electrical Engineering - CGPA: 9.02/10

June 2022
Pune, Maharashtra
